**Build Tools:** Webpack, Rollup, Vite, Babel

**Backend:** REST, WebSockets, SQL databases, Firebase, Node.js

**Infrastructure:** GCP, Linux, Docker, GitLab CI

**Language skills:** Full working efficiency in English, Native Russian speaker

## Experience

---

**Semrush**, Frontend developer

Nov 2021 – Feb 2026

Major marketing and SEO SaaS with 1K+ employees and \$320M+ ARR.

4 years 4 months

- Increased landing page conversion by 40% (from 1.2% to 1.7%) by leading a series of A/B tests on pricing and signup flows.
- Reduced CI build and test times from 16 minutes to ~7 minutes (~2.3x faster) by optimizing Webpack and Jest configuration.
- Developed the UI for an AI-powered review generation feature that became the most engaged feature of the year, recognized in the quarterly financial report for its business impact.
- Reduced the time to ship a new landing page from ~1.5 weeks to a ~3 days by architecting and implementing a code-splitting strategy for a legacy monolith.
- Launched a blog MVP using Next.js in just 2 weeks to support a new content marketing initiative, enabling the team to start attracting organic traffic immediately.

**Arcadia**, Fullstack developer

Oct 2018 – Sept 2021

Custom software developer.

3 years

- Engineered a video playback module using HLS.js, serving as the core media experience of the platform.
- Engineered a real-time chat module using Firebase, enabling direct communication between users within the platform.
- Developed an interactive map view with Leaflet.js to display complex real-time data overlays, providing critical operational insights for users.
- Migrated the application's backend from Firebase to a custom Node.js API to improve scalability and reduce operational costs as the user base grew.

**Nikfort**, Fullstack developer

Nov 2015 – Oct 2018

Real estate CRM and telecom service desk products.

3 years

- Built a shared Angular component library, which standardized UI across 3 products and accelerated new feature development for a team of 6 developers.
- Designed and built a customer engagement chatbot framework and web-based admin UI for non-technical staff.
- Redesigned a legacy service desk UI, simplifying core workflows and cutting average specialist response time in half.

## Education

---

**MS** **Bauman Moscow State Technical University**, Software Architecture

Russia

2010 – 2016

## Personal projects

---

### **Expense Tracker Mobile App** · [GitHub](#)

Unofficial mobile client for an existing expense tracker service to explore React Native.

### **Browser extension for autofilling email security codes** · [GitHub](#)

Browser extension to automatically fill email security codes on login - a frustration I'd wanted to fix for years. Used it as an exercise in building with Cursor cloud agents, which made for a surprisingly fast and enjoyable workflow.
